

ABDULLAH REHAN

ASSOCIATE SOFTWARE ENGINEER

Lahore, Pakistan | abduallahrehan@gmail.com | +92 321 9664576

SUMMARY

Aspiring Associate Software Engineer with hands-on experience building backend systems, authentication flows, and AI/ML-powered applications. Skilled in Python, REST APIs, FastAPI/Flask, and Retrieval-Augmented Generation (RAG), with practical experience across full-stack prototyping, data pipelines, and end-to-end system integration. Strong foundation in debugging, version control, and collaborative software delivery.

WORK EXPERIENCE

AI/ML Intern - QuickStart (Partner: Health Tech Academy)

Sept 2025 – Jan 2026

- Built and standardized metadata for healthcare education content to support AI-driven retrieval
- Supported AI workflow validation in a health-tech education environment
- Replicated a Retrieval-Augmented Generation (RAG) chatbot to support new healthcare courses, delivering accurate, context-aware responses from domain-specific knowledge bases
- Developed authentication flows including Sign Up, Login, Forgot Password, and Reset Password
- Implemented Privacy Policy and Terms & Conditions pages
- Rapidly prototyped features using AI-assisted (vibe) coding with Cursor
- Contributed to scalable backend architecture and efficient user management system

SKILLS

- | | | |
|----------------|-------------------------|------------------------|
| • TensorFlow | • Hugging Face | • Model deployment |
| • Scikit-learn | • EDA | • FastAPI / Flask |
| • LangChain | • Feature engineering | • Git / GitHub |
| • RAG | • Hyperparameter tuning | • Vector DB (Pinecone) |
| • LLMs | • CNN / Deep learning | • Fine-tuning |

EDUCATION

Bachelor's of Sciences in Business Analytics | FAST NUCES - Lahore Campus

Aug 2022 - June 2026

Concentration: Machine Learning & Predictive Modeling

CGPA: 3.00+

PROJECTS

Skin & Chest X-Ray Disease Detection | Python, TensorFlow, EfficientNet-B0, ResNet50

- Built a deep learning-based disease detection system for medical image classification using CNNs

Agentic AI-Powered Medical Diagnosis Assistant | Python, LangChain, LLMs, Hugging Face

- Built an AI chatbot for interactive diagnosis of cancer using Large Language Models.

Horse Race Outcome Prediction | Python, Scikit-learn, Pandas

- Developed a predictive model for race outcome forecasting using classification algorithms.

Intelligent Healthcare Learning Assistant | Python, LangChain, LLMs, RAG, Embeddings

- Extended a Retrieval-Augmented Generation (RAG) chatbot to support new healthcare courses, delivering accurate, context-aware responses from domain-specific knowledge bases
