About Me

Software Engineer with 3 years of experience as a Java + Angular Developer working with international clients in multicultural, cross-functional teams.

Professional Experience:

Company: System Limited

Current Designation: Consultant App Development:

- Developed multiple enterprise-grade projects from scratch using agile in multi-cultural and cross-functional teams.
- Implemented distributed caching using hazlecast for caching responses of APIs whose responses change infrequently
- Was tasked with implementing envelope encryption using hazlecast by storing user session details against an encrypted security key, instead of exchanging these details in JWT.
- Extensively utilized spring security and other related tools like spring interceptors, bean filters, centralized access provider for implementing complex authorization rules, efficiently managing the access for external and internal users, third party integrations and securing our own externalized endpoints.
- Designed logging beans using logback and spring AOP to create custom logging.
- Kibana for debugging and root cause analysis.
- Implemented a multitude of distributed transactions by following the saga pattern leveraging kafka and spring cloud streams and our own custom saga library.
- Created tens of scheduled batch processes using spring batch and quartz scheduler.
- Wrote CI/CD pipelines that connect Git repository on Azure DevOps to OpenShift Cluster using Webhooks.
- Developed FE for our user stories using Angular 17, leveraging standalone components, signals, rxjs library, angular material and sass for adding custom responsiveness.

Company: JFreaks

Designation: Software Engineer:

- I wrote the whole test suite for their product IpGeoLocation using JUnit, Mockito and MockMVC.
- I was responsible for managing AWS Spot Instances using Systems Managers.
- I wrote java code for automation of calculation of ping times from various availability zones from around the world to some specified Ip Addresses.
- The results were stored in a centralized S3 instance.
- I pre-configured each image to run our program automatically.

Skills:

- **Backend:** Java, Spring boot, JUnit, Mockito, Mock MVC, Resilience4j, Sl4j, Spring Security, REST, SOAP, Hazlecast, Quartz, Spring Batch, Kafka, Spring Cloud Stream, OAuth2
- **Frontend:** Angular, TypeScript, Angular Material, Sass, NgRx, Standalone Components, Angular Signals
- **Cloud & DevOps:** AWS (EC2, S3, IAM), Azure DevOps (CI), CI/CD pipelines, Linux
- **Databases:** Mongo DB, Oracle SQL

Education:

National University of Computer & Emerging Sciences (FAST)

BSc in Computer Engineering | CGPA: 3.48 | 2019-2023 | Lahore

Awards & Certifications:

- Systems Limited Rising Star Award 2025
- Java Master Class on Udemy by Tim Bulchalka
- AWS Masterclass on Udemy by Memi Lavi
- Testing Spring Boot: Beginner to Guru by John Thomson on Udemy
- Namaste JavaScript on YouTube

Language:

IELTS 8 band overall
